

Joe Rich water to be monitored Ground broken on new well

AM 1150

2/3/2012

Ground has broken on an important project to monitor the health of groundwater supplies for residents in the Joe Rich area.

The well is being drilled in one of 15 Okanagan aquifers identified as sensitive.

It will help to protect, manage and sustain groundwater supplies.

The project is part of the Okanagan Basin Water Boards plan of monitoring limited water supply and increasing demand.

Wells are also proposed for West Kelowna, Summerland, and UBC Okanagan lands.
