

Flyover

- “Here, goose-goose”
- Our watershed approach(es)
- Focal questions

Water for Life (2003)

Goals:

- Safe drinking water
- Healthy aquatic ecosystems
- Reliable water supplies

Approach:

- Knowledge and research
- Water conservation
- *Partnerships for watershed management and stewardship*

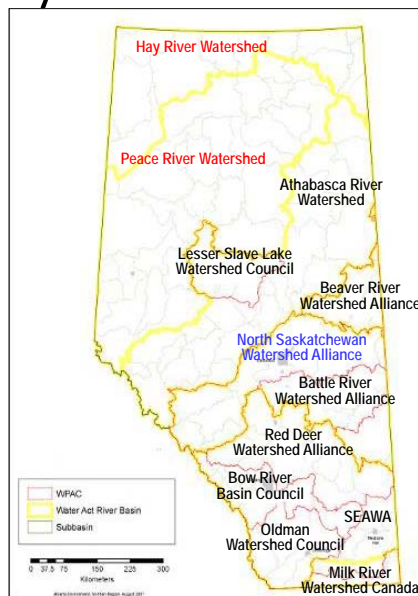

Key partnerships

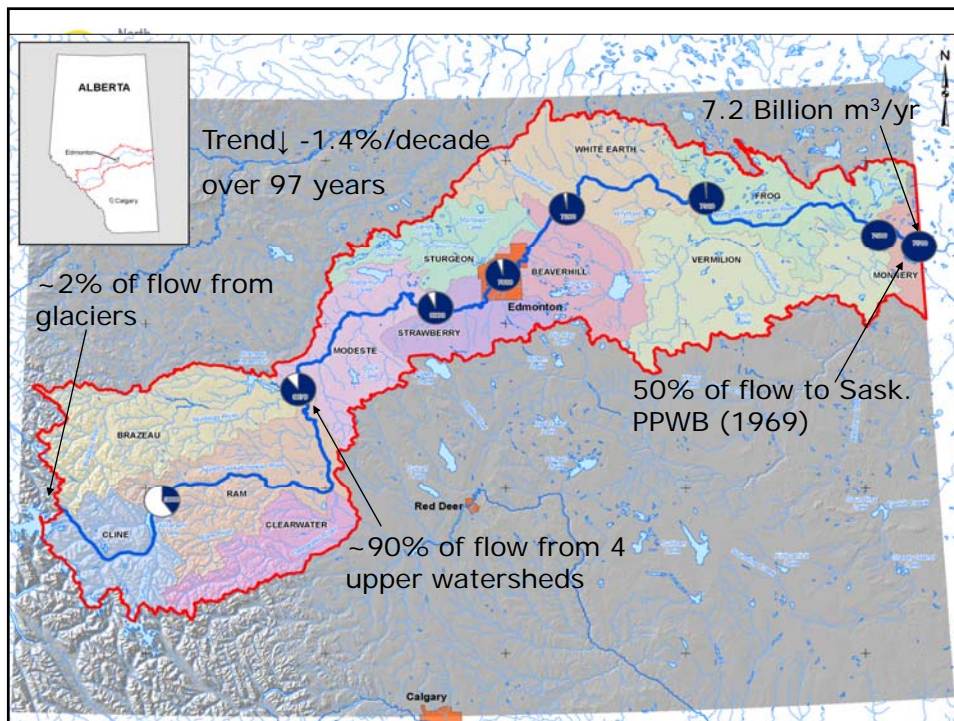

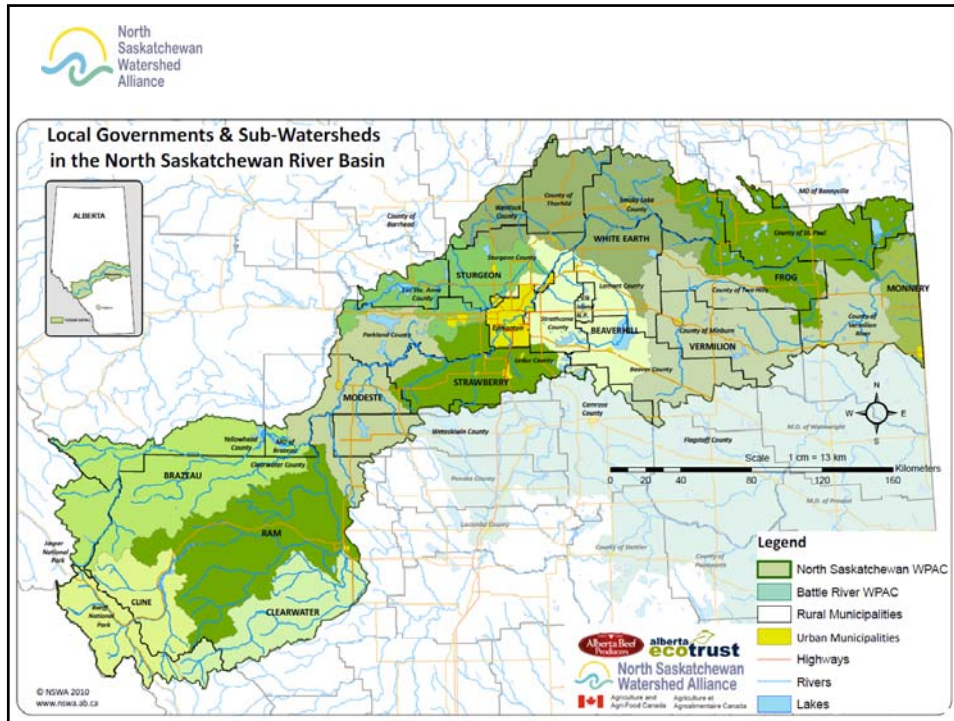

- Alberta Water Council
- Watershed Planning and Advisory Councils
- Watershed Stewardship Groups

Watershed Planning & Advisory Councils

- Ten **WPACs** have been appointed in Alberta
- Mandate:
 - Water for Life (2003)
 - Prepare “State of the Watershed Reports”
 - Prepare “Watershed Management Plans”

Yours to Protect

What is a Watershed?
A watershed is the area of land that drains into one body of water. The quality of our drinking water which comes from the North Saskatchewan River is directly related to the activities conducted in the watershed by municipalities, industry, agriculture and recreation.

The North Saskatchewan River flows east from its headwaters in the Canadian Rockies through the Prairies and into Hudson's Bay.

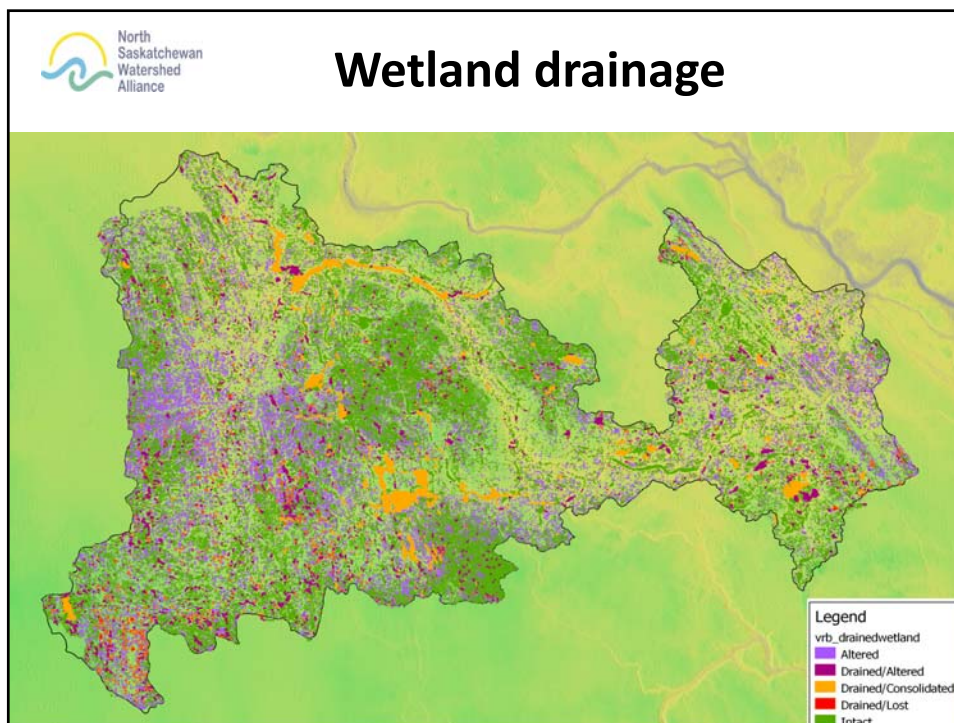

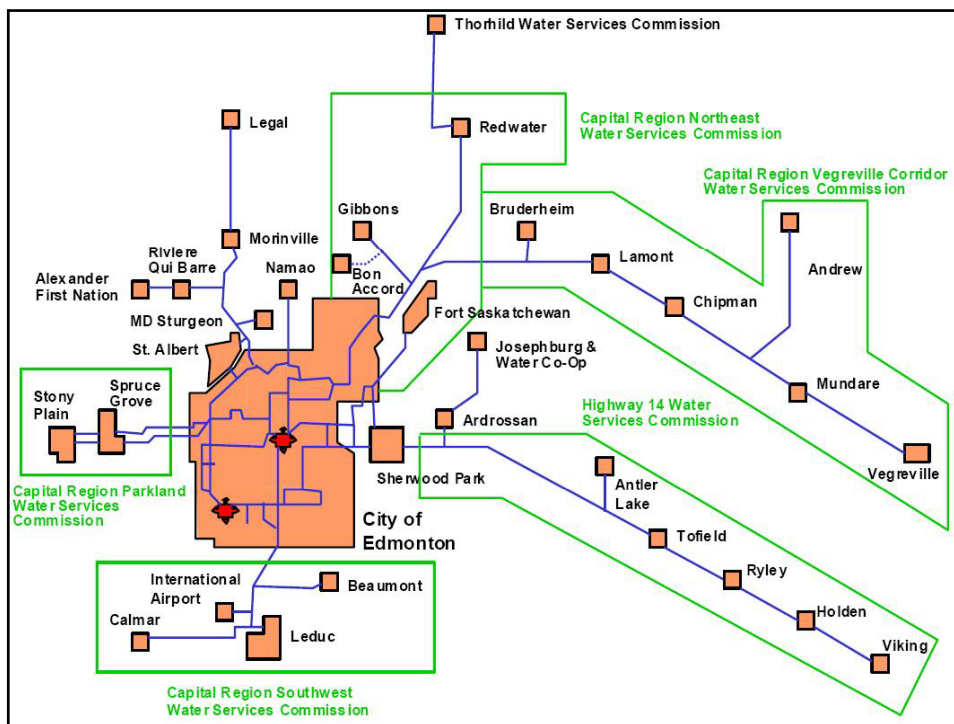

Keep our river clean

- Reduce the use of fertilizers, pesticides and herbicides.
- Do not dump materials into the gutters because they flow directly into the river.
- Clean up after your pets.
- Do not litter.

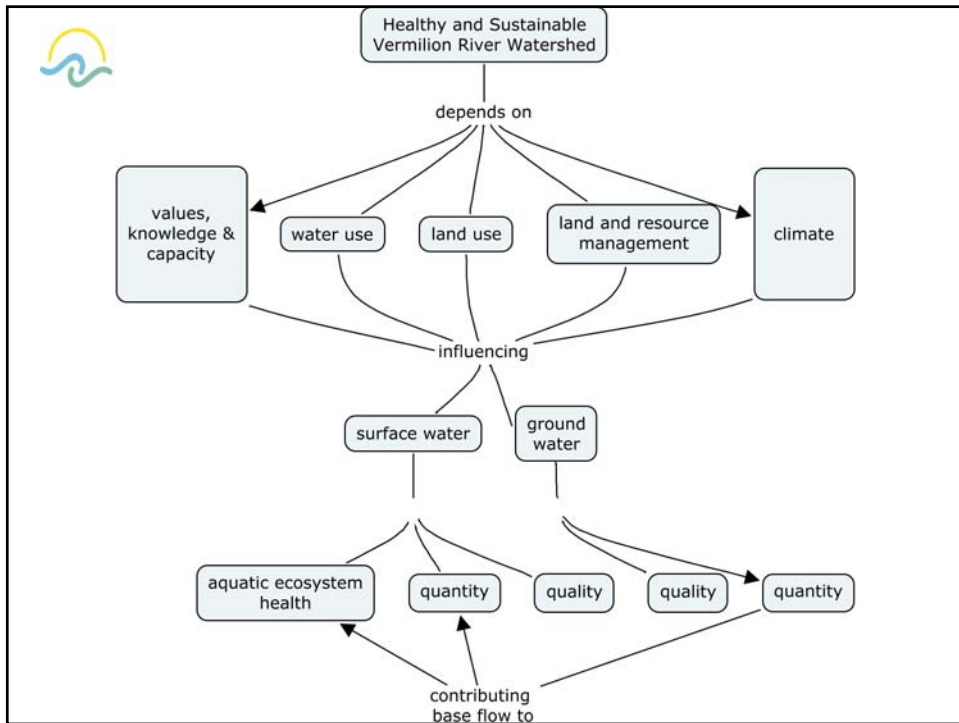

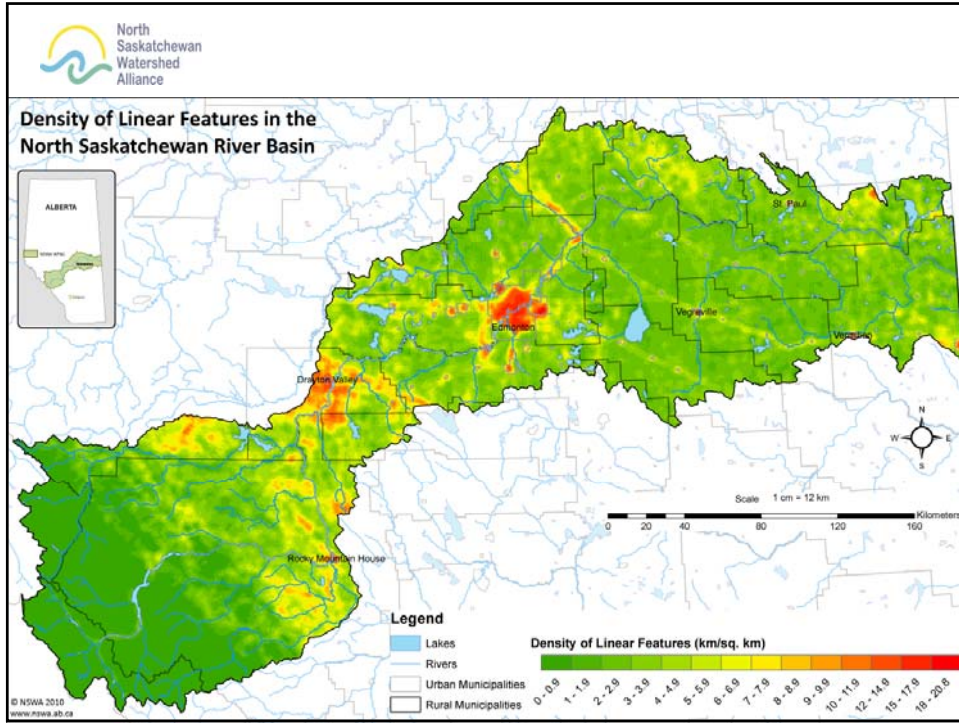

**ENVIRONMENTAL HOTLINE
1-800-222-6514
TO REPORT A SPILL**
